Exploring for Potential New Hotel Venues in Toronto

The City of Toronto, is the most populous city in Canada. It is diverse and is the financial capital of Canada. The city is a major center for banking and finance, retailing, tourism, real estate, advertising, legal services, insurance, theater, and the arts in the Canada. Hence, the market is highly competitive. Toronto has 140 neighbourhoods and a population of 2.9 million. It also receives about 43 million visitors every year.

Problem Description: Company ABC is planning to open a brand new hotel in Toronto and needs to select the best area to open its first location. If successful, the hotel will be able to open subsequent locations in other areas. Therefore, the selection of the first location is very important. Various factors need to be studied in order to decide in which location to open a new hotel, including :

- What is the population?
- What is the demographic?
- What are the most well-visited areas in the city?
- What is the segmentation of the borough?

Target Audience: To recommend the correct location, Company ABC has hired my Data Science team to complete a thorough analysis. The objective of this analysis is to provide a recommendation to Company ABC on which neighborhood of Toronto will be best area to open a new hotel. The analysis should include a detailed description of the rationale of the recommendations made.

Success Criteria: The success criteria of the project will be a good recommendation of borough/neighborhood choice to Company ABC based on population density in the area, number of hotels in that location and nearest venues like restaurants and cafes.

Data Acquisition

One city will be analyzed in this project: Toronto, Canada

We will be using the following datasets:

- Data 1 : Dataset containing the list of all neighbourhoods in Toronto, as well as the latitude and longitude of each neighbourhood:
  https://en.wikipedia.org/wiki/Demographics_of_Toronto_neighbourhoods
- Data 2: Dataset containing Postal Codes for different Neighbourhoods in Toronto. Link to dataset: https://en.wikipedia.org/w/index.php?title=List_of_postal_codes_of_Canada:_M&oldid=942851379
- Data 3 : The following data will be retrieved from Wikipedia - https://en.wikipedia.org/wiki/Toronto https://en.wikipedia.org/wiki/Economy_of_toronto
    - Toronto Population
    - Toronto Demographics
- Data 4 : Toronto's geographical coordinates will be utilized as input for the Foursquare API, that will be leveraged to provision venue information for each neighbourhood. We will use the Foursquare API to explore neighbourhoods in Toronto. Link to the dataset is: https://developer.foursquare.com/docs/data

Methodology

For this analysis, we have used the Kmeans clustering method. We have created a dataframe combining all of our datasets and created 5 clusters.

Analysis

First, we start by importing the required libraries.

```
In [77]:  import numpy as np # library to handle data in a vectorized manner
          import pandas as pd # library for data analsysis
          pd.set_option('display.max_columns', None)
          pd.set_option('display.max_rows', None)
          import json # library to handle JSON files
```

```python
!conda install -c conda-forge geopy --yes # uncomment this line if you
 haven't completed the Foursquare API lab
from geopy.geocoders import Nominatim # convert an address into latitud
e and longitude values
import requests # library to handle requests
from pandas.io.json import json_normalize # tranform JSON file into a p
andas dataframe
# Matplotlib and associated plotting modules
import matplotlib.cm as cm
import matplotlib.colors as colors
# import k-means from clustering stage
from sklearn.cluster import KMeans
from sklearn.datasets.samples_generator import make_blobs
!conda install -c conda-forge folium=0.5.0 --yes # uncomment this line
if you haven't completed the Foursquare API lab
import folium # map rendering library
from bs4 import BeautifulSoup
import lxml
print('Libraries imported.')
```

Clustering Toronto's Neighbourhoods

First, we will connect to Foursquare to explore and segment the data

```

```
In [41]: LIMIT = 100 # limit of number of venues returned by Foursquare API

Results The following are the highlights of the 5 clusters above:

1. Hotels are clearly located only in Cluster 1, which makes the selection of the final location for a new hotel easily identifiable in order for company ABC to reduce risks
2. Restaurants, nightlife, and coffe shops are very popular in Cluster 1 as well
3. As for Yoga, this is clearly allocated in Cluster 0
4. Although, the Clusters have variations, a very visible presence is the predominance of bars and restaurants, which is typical for any big city

Discussion and Conclusion It is noticable that Cluster 1 is the most viable cluster to build a new hotel. The proximity to a big number of Restaurants (lunch and dinner venues for guests), coffee shops and other amenities are also very important points to take into account. This cluster contains Hotels in the top venues in Central Toronto, Downtown Toronto and North York. In conclusion, this project would have had better results if we had more data available in terms of actual land pricing data within the area, public transportantion access and allowance of more venues exploration with the Foursquare. However, based on the available data, the analysis shows that the best option for Company ABC would be to focus on only three Toronto Neighbourhoods (Central Toronto, Downtown Toronto and North York) when establishing a new hotel.
